# **Emergence of Consonants in Young Children with Hearing Loss**

Mallene Wiggin, Allison L. Sedey, Rebecca Awad, Jamie M. Bogle, and Christine Yoshinaga-Itano

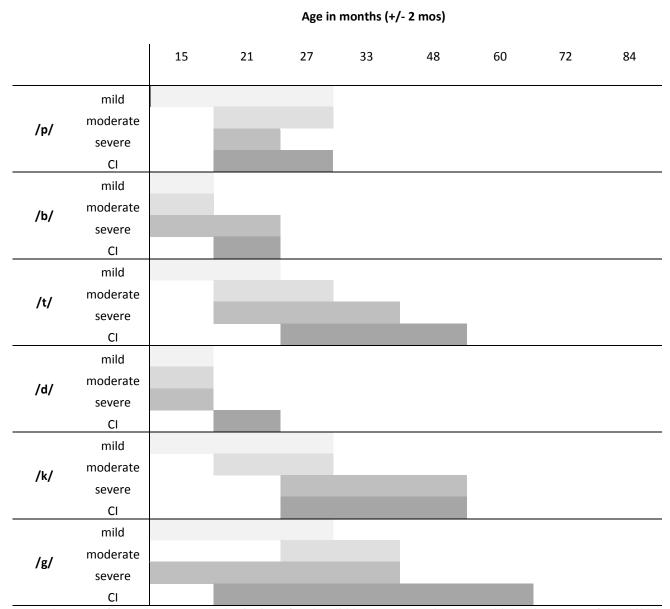

Chart 1: Development of stop phonemes: The beginning of each solid bar represents the age at which at least 50% of the children produced the sound and ends when at least 80% of the children produced the sound.

## Age in months (+/- 2 mos)

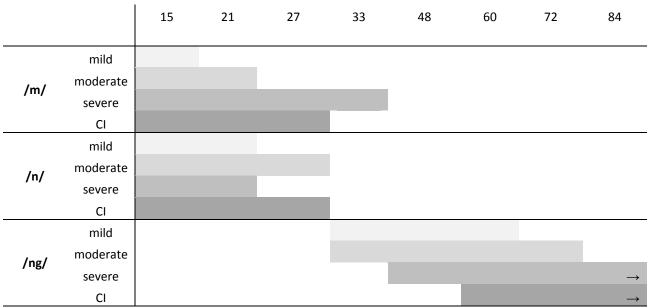

Chart 2: Development of nasal phonemes: The beginning of each solid bar represents the age at which at least 50% of the children produced the sound and ends when at least 80% of the children produced the sound. The arrow  $(\rightarrow)$  indicates that 80% of the children were not yet producing the phoneme by 84 months of age.

#### Age in months (+/- 2 mos)

Chart 3: Development of liquid phonemes: The beginning of each solid bar represents the age at which at least 50% of the children produced the sound and ends when at least 80% of the children produced the sound.

## Age in months (+/- 2 mos)

Chart 4: Development of affricate phonemes: The beginning of each solid bar represents the age at which at least 50% of the children produced the sound and ends when at least 80% of the children produced the sound. The arrow ( $\rightarrow$ ) indicates that 80% of the children were not yet producing the phoneme by 84 months of age.

## Age in months (+/- 2 mos)

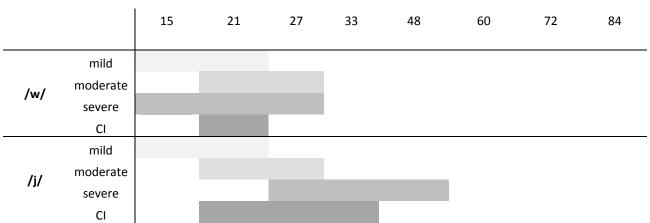

Chart 5: Development of glide phonemes: The beginning of each solid bar represents when at least 50% of the children produced the sound and ends when at least 80% of the children produced the sound.

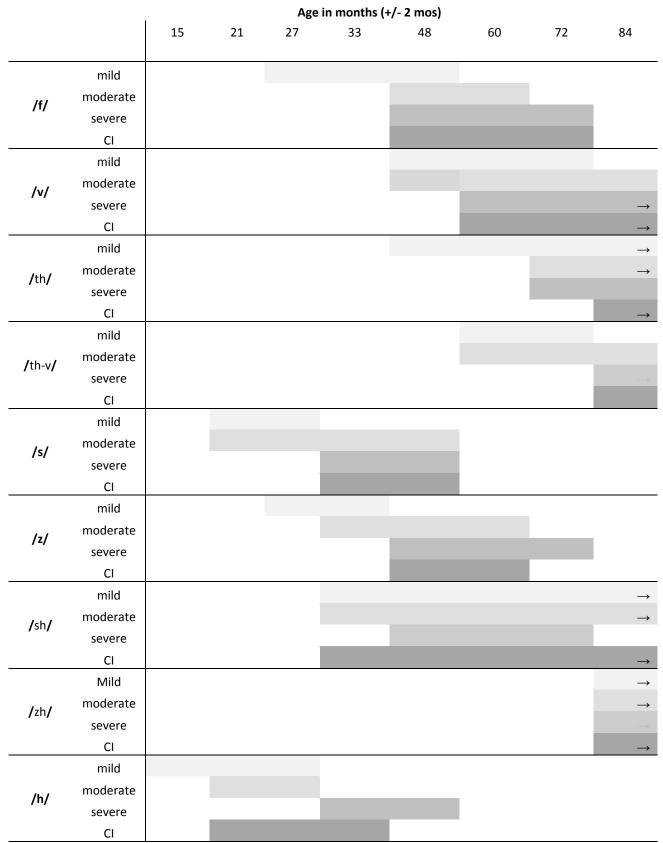

Chart 6: Development of fricative phonemes: The beginning of each solid bar represents when at least 50% of the children produced the sound and ends when at least 80% of the children produced the sound. The arrow ( $\rightarrow$ ) indicates that 80% of the children were not yet producing the phoneme by 84 months of age.
